STUDENT ACTIVITY

Answer these five questions to help you learn what type of college you should attend. Then, get a more realistic picture of the future by completing the planning questions at the bottom of the page.

PLAN YOUR FUTURE!

- I like when my teacher:
 - Gives us projects and I participate
 - Gives lectures and I take notes
- I would rather go to:
 - College for two years
 - College for four or more years
- I would rather:
 - Fix something with my hands
 - Read about a new topic that interests you
- I like:
 - Short-term projects where I can see the results
 - Long-term projects where I can set goals
- I am a better:
 - Creator
 - Planner

If your answers are...

Mostly A's: Look into community colleges and apprenticeships, where you'll get more hands-on time. But remember that ultimately, your career goal will determine the kind of training you need. You may be able to do a lot of projects or work with your hands at a four-year college, too.

Mostly B's: Look into four-year colleges and universities. If your career goal leads you elsewhere, don't worry – a love of learning will come in handy in any setting.

Your High School Plan

If you're not sure what type of training you'll need or which careers match your interests, start your research at LearnMoreIndiana.org.

My career goal is _____.
(Example: High School Chemistry Teacher)

The degree(s)/credential(s) I will need are _____.
(Example: Bachelor's degree in Secondary Education and teaching license)

In high school, I will prepare by:

Earning this high school diploma: _____

Taking these courses that relate to my future career: _____

Taking these college entrance exams (SAT, ACT, ASVAB, etc.): _____

Participating in these extracurricular activities: _____

Does this plan match with your quiz results? Remember: the most important thing to keep in mind when choosing which type of education to pursue after high school is your career goal.
